

Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is a device made out of high quality materials meant to withstand the most difficult procedures and work environments. This particular piece of equipment could enable the one driving to be able to work the blades hydraulically without leaving the seat. Side shifting models have the extra ability to laterally position the entire load or the arms in order to facilitate much more accurate carrying and position in a faster and more effective way.

The blade pocket is quite unique and enables the individual operating it to be able to securely swing the forks into position without any worry of damaging the positioning cylinders. This could allow the driver the choice to execute independent or simultaneous fork movement, dependent upon the job requirement. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into fork positioners on existing units.
